

RIMJET

Supinator Pronator

Product Brief

A body powered Supinator-Pronator that allows rotation of the hook (terminal device) with various locking positions to overcome a workload for different functions of daily living.

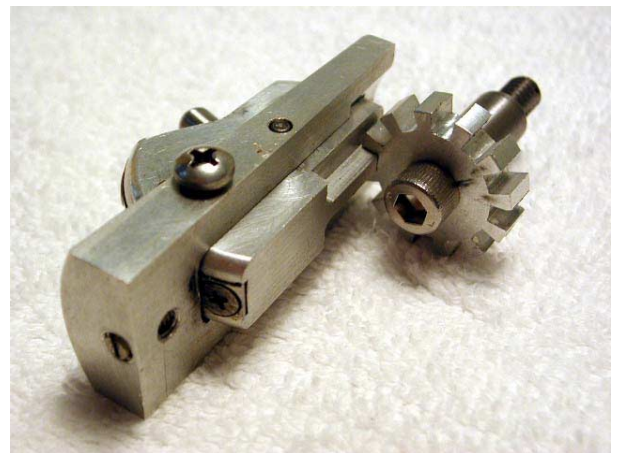

The degree of difficulty is greatly diminished by the ability to rotate the hook (terminal device) with ease. The Supinator-Pronator unit is well suited for the trans-humeral unilateral amputee as well as the bilateral amputee. It is also well suited for the trans-radial unilateral amputee. The Supinator-Pronator is a retrofit unit that can be installed at anytime into any prosthetic forearm.

Key Benefits

- Ease of operation for the terminal device
 - Solid locking positions
- Installed in any prosthetic forearm
